ELECTRICAL TESTING AND CERTIFICATION

As an OSHA Nationally Recognized Testing Lab (NRTL) since 1998, NSF International tests and certifies electrical products for the commercial food equipment, recreational water products, drinking water and waste water treatment and distribution. We offer witness testing, manufacturer data programs and CE testing for clients that meet the minimum OSHA requirements.

We can provide testing and certification to many electrical standards as a standalone service or as add-on to certification to NSF/ANSI 50, NSF/ANSI 61 or any of the NSF/ANSI food equipment standards.

Certification helps products meet regulatory requirements. For example, the National Electrical Code (NEC) specifies in Article 90.7 that all electrical equipment be approved. OSHA states in 29 CFR 1910.310 and the NEC states in Article 110.3 that all equipment in the workplace must be listed and labeled by a Nationally Recognized Testing Lab prior to operation of the equipment.

BENEFITS OF NSF'S ELECTRICAL CERTIFICATION

> Certified products are listed on NSF's website and can be marked with the NSF electrical mark. The website is also a great tool for inspectors or clients to view the listing(s).

> If you bundle your electrical certification with product certification, you only need one certifying body for your entire facility.

> The NSF mark is recognized by more consumers than many other NRTLs' marks.

> Confidence that your equipment will meet the requirements of OSHA and the NEC.
