

CDP DISCLOSURE ASSESSMENT: A PATH TO CONTINUOUS IMPROVEMENT

The globally recognized CDP reporting system helps companies standardize and simplify their data collection, impact assessment and stakeholder communication for carbon and resource management. By disclosing to CDP, companies demonstrate their commitment to climate action, resource conservation, and risk mitigation.

For many companies though, accurately and completely disclosing to the CDP Climate Change questionnaire can be challenging. With a range of subject areas from scenario analysis to stakeholder engagement, it can be difficult to fully capture all the climate initiatives your organization is undertaking.

Through our CDP Score Assessment service, we can help streamline your review process, improve your disclosures, and plan for future climate action and performance.

ROADMAP TO EFFECTIVE CDP DISCLOSURE

NSF's roadmap to a complete CDP disclosure highlights your company's strengths and promotes continuous improvement

A SCORE ASSESSMENT PROVIDES:

- > **An opportunity** to have a third party take a fresh look at your disclosure and identify areas for improvement
- > **Feedback on** which areas in the disclosure are well-informed, and which require a more robust response and/or institutional system
- > **Recommendations for** improving disclosure and scoring, based on an assessment against the CDP scoring methodology
- > **A plan to improve** your CDP Climate Change score by enhancing both the quality of the report and the climate-related systems and procedures at your company
