Registering Edge Codes with Reports NSF <u>Has</u> Previously Received

If a manufacturer has already <u>authorized NSF to receive a report</u>, then it's easy to register new edge codes which use that formulation. Or, if a manufacturer needs to remove one of its edge codes from <u>the listing</u>, then this method can remove it.

This method can only be used if NSF has already received the test report from the test lab.

1. Manufacturer completes the <u>Edge Code Modification Form</u>. This tells NSF what edge codes to add and/or remove from the <u>current list of registered edge codes</u>.

↓

2. NSF reviews the <u>submitted Form</u> to ensure the requested additions/removes can be performed.

↓

4. NSF submits self-certification form to Manufacturer with new edge codes.

↓

5. Manufacturer completes/signs self-certification form and submits it to <u>FrictionMaterial@nsf.org</u>.

↓

6. NSF finishes the registration process and <u>publicly posts the required information</u>.
